GridTracker v1.24.0922
*An Amateur Radio Companion*

September 22th, 2024

Notes

We tried updating the core engine that powers GridTracker, NWJS to version 0.78.1 which has some performance improvements on Windows 11 and macOS. However this caused Windows 7 and 10 and Ubuntu installs to have issues. We have reverted to 0.68.1 in this release.

You can now move buttons in the button panel, hold down the shift key (⇧) and right-click a button to begin moving. The button will have a dashed border when in edit mode.
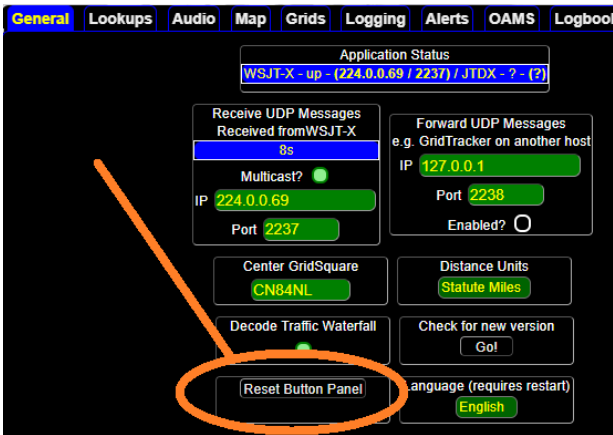

You can then right-click another button to swap positions with the selected button and editing is complete.

OR

Use the Left (←) and Right (→) Arrow keys or Mouse-Wheel (🖱) to move the button left or right.

To finish editing press right-click on the button being edited or the 'Enter key ⏎' or the 'Esc key' or move the mouse out of the button panel.

You can reset the button order in Settings → General → Reset Button Panel

Change Log

- Mac - Fixed some network issues on macOS 15 (Sequoia)

- Panel - Data selector now a drop-down like the others

- Panel - Buttons are now movable (Shift-Key + Right-Click)
